

CDC Pregnancy Development and Milestones Guidelines:

1. Second Trimester Milestones (Weeks 13 to 27):

At week 20, the baby is about the size of a banana, and fetal movements (quickening) are often felt for the first time.

At week 24, the baby's lungs are forming surfactant, and the baby begins to develop sleep-wake cycles.

2. Third Trimester Milestones (Weeks 28 to 40):

At week 28, the baby's eyes are partially open, and eyelashes have formed. The baby's brain is growing rapidly, and they can perceive light and sound. Fetal movement counts (kick counts) should be tracked daily. A healthy baby should move at least 10 times within two hours.

At week 36, the baby is gains weight rapidly (about half a pound per week). The space inside the uterus becomes tighter, and movement changes from sharp kicks to rolling or squirming.

3. Safe Activities:

Safe physical activities during pregnancy include brisk walking, swimming, prenatal yoga, and stationary cycling. Avoid contact sports, activities with a high risk of falling, or lying flat on your back for extended periods in the second and third trimesters.
